

Test Hyperref Metadata

A.. Author

October 31, 2024

1 Intentionally Left Blank

Nothing left to say, really.

2 URL's

Hyperref loads url, but redefines it

Special characters still neutralized: `http://example.com/foo_bar`, `http://example.com/foo#bar`, `http://example.com/foo&bar`.

But macros expanded: `http://localhost/dir/index.html`.

And, you get this: `http://example.com/~{}user`

3 Bounded color

A link: [here](#).

3.1 Color should not leak into this heading

This text should be black.

A simple macro: [first and second](#).

3.2 Color should leak into this heading

This text should be blue.
